STATINTL MEMORANDUM FOR: [REDACTED]
APEX Security Advisor

STATINTL FROM: [REDACTED]

SUBJECT: Status Report - SCI Access Survey

1. This was the first full week devoted to marking selected SCI documents at OCR, PPG and NPIC to be monitored during their circulation to determine witnessed access. Approximately one hundred such documents have been tagged with a new routing slip, twenty or so of which have been completed thus far.

2. Initial observations from this incomplete sampling may be of interest even if already known or suspected:

STATSPEC

- Documents/publications originating at other agencies are normally internally routed by an established list and, therefore, they go to the same people, e.g., at [REDACTED] the NSA SIGINT Summary received the same daily distribution to 12-14 persons.

- SCI controlled documents received from external sources are normally the same types of documents - summaries, intelligence reports, and reports.

- The volume of SCI controlled documents being received from other agencies is relatively insignificant when compared to the volume of controlled documents and uncontrolled electronic dissemination and working papers being circulated within CIA.

- Relatively few ^{SITK} SCI controlled documents are received by CIA components other than those involved in using or producing intelligence information; e.g., DDA/LOGS, 5 documents this year; DDA/OS, 23-25 documents this year; DDA/REG a couple of documents this year.

- Of that amount of SCI documentation being circulated within non-using, non-producing components of CIA (OS, LOG, PPPM, etc.) only a very small percentage concerns product or operational information. It is basically administrative in nature and could indeed be handled outside of the SCI; e.g., name trace requests from the West Coast are sent to Headquarters Security via [] Channels and thus, even though an electronic transmission and in cable format, it requires SCI handling and access approval.

STATINTL

- Total Agency personnel in the Washington area who do not possess SI Access approval - 340.

- Total Agency personnel in the Washington area who do not possess TK Access approval - 935.
